ONE-PAGE BRIEF

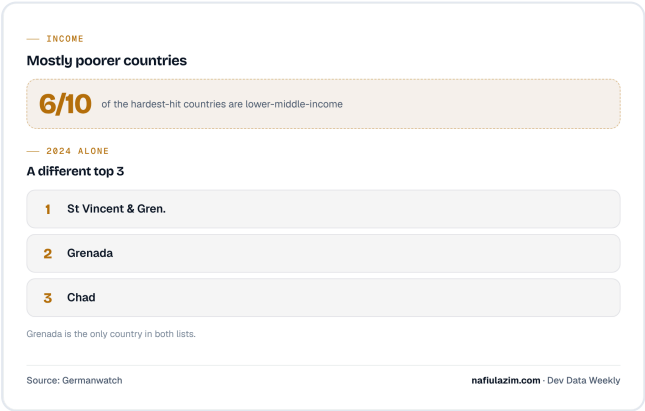

Extreme weather killed 832,000 people in 30 years. 6 of the 10 hardest-hit countries are lower-middle-income.

As COP31 meets in Antalya, here is who extreme weather has hit hardest over three decades, how many people it forces from home, and what it costs women and health.

KEY TAKEAWAYS

1. Extreme weather (storms, floods, heat waves and more) killed **more than 832,000 people** worldwide in 1995–2024 and caused **over US$4.5 trillion** in direct losses, according to the Germanwatch Climate Risk Index.
2. Of the **10 countries** hit hardest by extreme weather in 1995–2024, **6 are lower-middle-income**. Dominica, Myanmar and Honduras top the list.
3. In rural areas of 24 low- and middle-income countries, households headed by women lose **8% more** of their income to heat stress and **3% more** to floods each year than households headed by men (FAO).
