ONE-PAGE BRIEF

Rich countries delivered $136.7 billion in climate finance. The poorest got 7%.

Ahead of COP31 in Antalya, here is what developed countries have delivered, what the next goals ask for, and who is still waiting for the money.

KEY TAKEAWAYS

1. Rich countries gave or mobilised **US$136.7 billion** in climate finance for developing countries in 2024. To meet the new goal of **US$300 billion a year by 2035**, that must grow about **2.2×**.
2. The poorest (low-income) countries received just **7%** of that climate finance in 2024.
3. To **adapt** to climate change (for example flood defences or drought-resistant farming), developing countries will need **US$310–365 billion** a year by 2035. In 2023 they received **US$26 billion** in international public funding for this.
